

# Dissertation outline

SUMMARY	1
ZUSAMMENFASSUNG	2
INTRODUCTION	5
1. Function and structure of the heart	5
1.1. The morphology of the heart	5
1.2. Electrical activity of the heart	7
2. Long-term primary culture of adult cardiac myocytes	12
2.1. History of heart cell culturing	12
2.2. The purposes of using cell culture	13
2.3. Culture of adult ventricular myocytes	14
2.4. Continuous electrical stimulation of cell populations	15
3. $\text{Ca}^{2+}$ signalling in cardiac cells	16
3.1. Excitation-contraction coupling	17
3.2. Classification of $\text{Ca}^{2+}$ events in cardiac muscle	18
3.3. Nuclear $\text{Ca}^{2+}$ signals	21
4. Neurohormones and $\text{G}_q$ -coupled pathways	21
4.1. Cellular pathways coupled to $\text{G}_q$ -proteins	22
4.2. Neurohormones and cardiac pathologies: examples	24
OBJECTIVES OF THE STUDY	27
MATERIALS AND METHODS	29
1. Isolation and primary culture of adult rat ventricular cardiomyocytes	29
2. Electrical stimulation	30
3. Measurements of cell length changes	31
4. Fluorimetric $\text{Ca}^{2+}$ recordings	32
5. Adenovirus construction	34
6. Confocal imaging	34
7. Data analysis	35

8.	Hormonal stimulation	37
9.	Solutions for measurements	38
10.	Statistics	38
RESULTS		38
1.	Establishment and exploration of a single-cell model for adult rat cardiomyocytes	38
1.1.	Electrical field stimulation of the cardiac myocytes	38
1.2.	Long-term culture of cardiomyocytes: whole cell morphology and survival rates	39
1.3.	Long-term culture of cardiomyocytes: analysis of cross-striation	44
1.4.	Cell shortening-electrical stimulation frequency relationship	46
1.5.	Ca <sup>2+</sup> transient-electrical stimulation frequency relationship	50
1.6.	Inverse pericam expression and Ca <sup>2+</sup> measurements	53
1.7.	The loading state of internal Ca <sup>2+</sup> stores	55
1.8.	Spontaneous Ca <sup>2+</sup> waves	57
1.9.	Spatially restricted Ca <sup>2+</sup> signals: sparks	59
2.	Induction of cardiac remodelling in long-term cultured adult rat cardiomyocytes	63
2.1.	Chronic G <sub>q</sub> -coupled receptor stimulation: morphological study	63
2.2.	Electrical pacing-induced Ca <sup>2+</sup> transients in hormone-stimulated myocytes	65
2.3.	The loading state of internal Ca <sup>2+</sup> stores during chronic neurohormonal stimulation	71
2.4.	Spontaneous Ca <sup>2+</sup> waves	75
2.5.	Spatially restricted Ca <sup>2+</sup> signals: sparks	76
2.6.	Nuclear Ca <sup>2+</sup> signals during spontaneous activity	79
DISCUSSION		81
1.	Long-term culture of adult cardiomyocytes	81
2.	G <sub>q</sub> -induced Ca <sup>2+</sup> remodelling	85
CONCLUSION AND OUTLOOK		90
